INTRODUCTION

Welcome! Here is a guide to show you how to use this application, we will be covering all features that this application can do from converting your favourite currency to change the look and feel of your application.

GETTING STARTED

When you first start using this application this is where you will start:

Here you can see that we have a few controls that you can play around with.

GETTING THE LATEST CONVERSIONS RATES

To get the latest conversion rates we will need to update our application. By pressing the update button the app will get the latest updates and use them for the conversions.

Simply click here:

And you should get something like this:

USING THE ACME CURRENCY CONVERTER

To use the app to make a covert a currency simply picks the currency you want to convert from the spinners:

Then enter the amount you want to convert and then the conversion of that amount is displayed below:

SAVE CURRENCY RATE

To save the current currency rates that were updated just use the save button here:

Once clicked the message will display the time and date of the save:

CHANGING THEME

If you want to change the theme there are a few options, night, nature, fluro, construction and the default. To choose the theme click on the menu icon in the action bar or if your phone has a settings button click there like this:
